

PAMP[®]
Produits Artistiques Metaux Precieux

A GLOBAL REPUTATION FOR QUALITY EXCELLENCE

PROVENANCE is supported by the strength of years of expertise and unrivaled accreditation and compliance within the global precious metals industry. We invite you to visit pamp.com where you can review our history and accreditations, continually updated, in detail. However, the following regulatory standards, in which PAMP maintains a leadership role, are particularly integral to the **PROVENANCE** guarantee:

OECD Due Diligence and Gold Supplement

The MKS PAMP GROUP took a leadership role as part of the steering and implementation committee to develop the Due Diligence and Gold Supplement of The Organisation for Economic Co-operation and Development (OECD). Conflict-free engagement and business practices as well as compliance with extensive human rights conditions are primary requirements.

LBMA Responsible Gold Guidance

As the World's Authority for Precious Metals, the London Bullion Market Association (LBMA), relied on the MKS PAMP GROUP as primary developers of Responsible Gold Guidance requirements. Mandatory for all members, these standards combine current OECD regulations with additional criteria concerning Anti-Money Laundering and Anti-Terrorism Financing. The first refinery to comply, PAMP is also one of only three refineries worldwide designated as 'Referee' by both the LBMA and the London Platinum and Palladium Market (LPPM).

Responsible Jewelry Council

PAMP played an essential role assisting the RJC in the development of its own mandatory practices for its members. Together with the OECD standards, the RJC requires compliance with specific Anti-Money Laundering, Anti-Terrorism Financing, Worker Safety, and Social and Environmental codes of conduct.

Social Accountability International

MKS PAMP GROUP refineries are the world's only refiners to hold the SA8000 accreditation, which ensures compliance with ethical workplace standards within the company and throughout the supply chain.

Artisanal and Small-Scale Miners

The MKS PAMP GROUP is engaged in a number of initiatives supporting the betterment of the ASM as well as their direct access to international markets.

LEADERSHIP THROUGH INTEGRITY

Since its establishment in 1977, PAMP has earned a global reputation for anticipating and meeting the needs of the industry it serves. This new century brings with it a rapidly growing, customer demand for certified metals – set against a background of limited supply and an inadequate,

segregated responsible sourcing supply unable to achieve the necessary scale. Indeed, PAMP foresees segregated responsible sourcing as the norm for all precious metals requirements, with clients delegating to refiners the responsibility of metal sourcing. And so with nearly

a half century of expertise behind it, and with more official international accreditations than any other refinery, PAMP now offers its diverse clientele an unprecedented service of authenticated sourcing and segregated production process management: **PROVENANCE™**.

TRANSPARENCY IS TRUST, AND TRUST IS PRECIOUS

Based in Switzerland and an integral part of the MKS PAMP GROUP, PAMP is well positioned to bring its responsible sourcing know-how to a wide-ranging product line. Ensuring the most scrupulous sourcing available worldwide, **PROVENANCE** offers clients an authenticated and fully traceable sourcing and production process service applicable to all PAMP products, including minted and cast bars, as well as semi-fabricated products such as blanks, strips, grains, crystals and solutions. And because PAMP has built a global reputation upon developing personalized client relationships, **PROVENANCE** can be further tailored to meet specific client needs or requirements.

✓ Scrupulous Sourcing

Encompassing gold, silver, platinum and palladium, **PROVENANCE** helps customers to determine compliant mines or mine types as well as other metal sourcing alternatives such as recycled materials or bullion bars that take every compliance variable into account, including:

- Newly mined versus recycled metals
- Countries of origin
- Mine Certification Status
- Mines meeting particular environmental or ethical standards

✓ Supply Chain Integrity

PROVENANCE guarantees customers full traceability of metals and products throughout each step of the sourcing and production process:

- Dedicated handling of metals from mines to the refinery
- Dedicated pre-refining melt
- Dedicated refining cells
- Dedicated melting of sponge resulting from refining
- Dedicated lots for minting or casting or semi-fabricated production

✓ Product Guarantees

PROVENANCE includes PAMP's entire range of cast or minted bars, as well as semi-fabricated products such as strips, grains and blanks, backed by product guarantees:

- A Certificate of Origin that distinguishes each product type as being of singular origin and meeting the highest ethical standards
- For applicable products, clients also have the option of adopting the **PROVENANCE** stamp-of-assurance, a registered mark that further enhances the client's reputation as a foremost brand of conscience

Significantly, the **PROVENANCE** system is augmented with advanced **Blockchain technology** developed specifically for the precious metals supply chain. An independent and decentralized, peer-to-peer data network, this best-in-class system provides customers with an immutable, authenticated record of each step of the sourcing and production processes.
